Report – *Reducing Carbon*

Emission and Water Intake

Definition:

In this case, carbon emission refers to the release of carbon and other greenhouse gases into the environment as a result of operations and business practices. Water intake refers to the use of water in manufacturing and other business processes.

Example:

Company A reduces carbon emissions by using renewable energy sources to power their plants wherever possible.

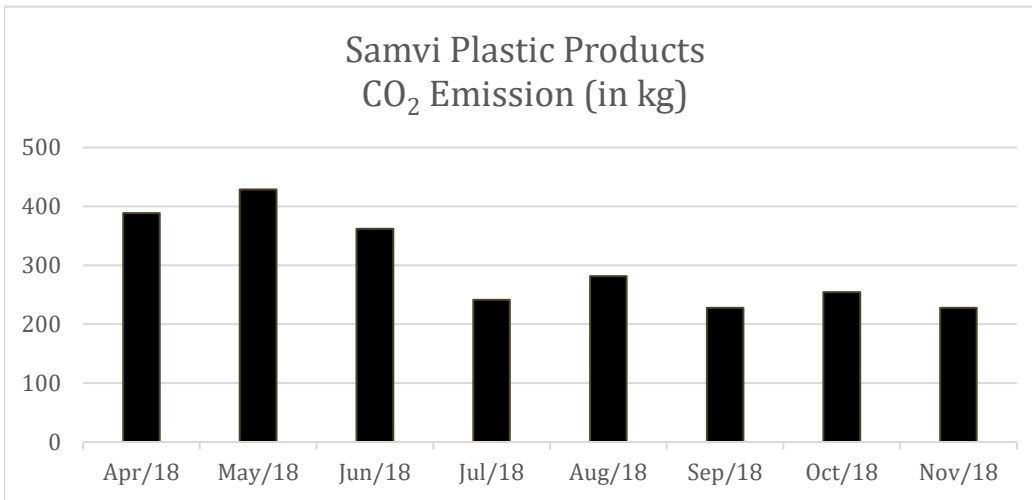

Requirements:

- You shall reduce carbon emission and water usage wherever possible

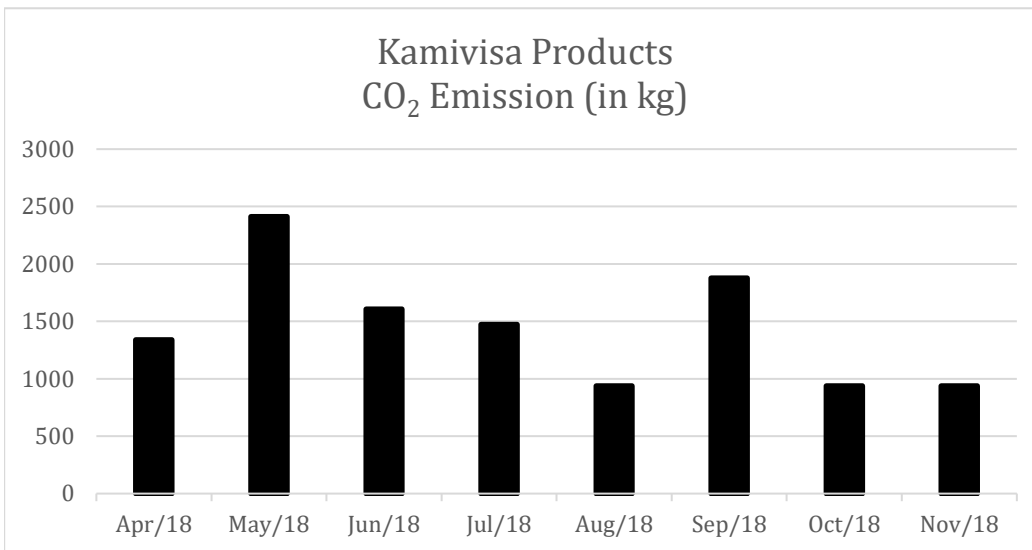

CO₂ Emission:

CO₂ emission is tracked regularly both at Kamivisa and Samvi. Here are the graphs for both our units.

Samvi Plastic Products

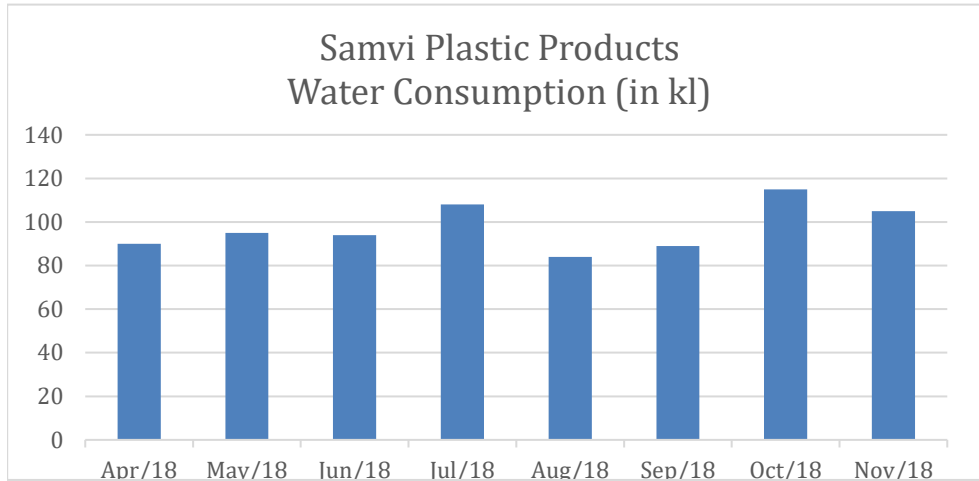

Kamivisa Products

Water Consumption:

Water consumption is also monitored regularly both at Kamivisa and Samvi. Here are the graphs for both our units.

Samvi Plastic Products
