

AJM GROUP

Report – *Efficient Systems and Processes*

Definition:

Efficient systems and processes are those that reduce energy and resource usage and minimize waste.

Example:

Company A is a car manufacturer. They switched to a metal fabrication process that reduced the amount of electricity needed to produce each car. Their new process is more efficient and environmentally friendly than their previous one.

Requirements:

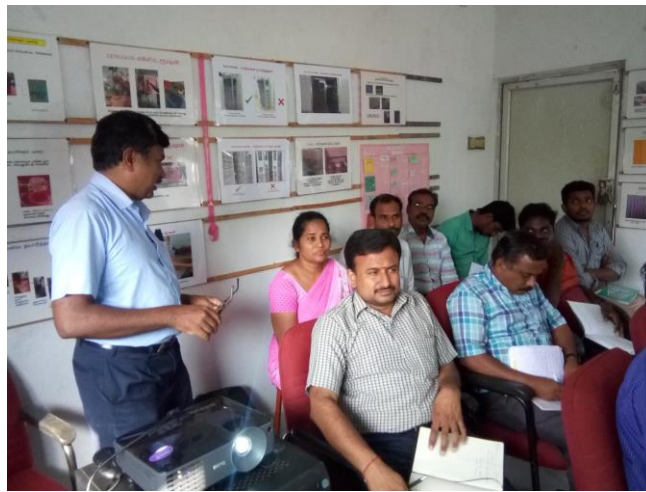

- You shall use systems and processes that are environmentally friendly and efficient whenever possible

Initiatives:

The following initiatives were undertaken at the AJM Group to bring awareness on this front.

Energy Conservation Month

In December 2017, we celebrated Energy Conservation Month.

Energy Conservation Day 2018

On December 14, 2018 we celebrated Energy Conservation Day.
